CLIMATE CHANGE AND CITIES

(Credits: 3)

TAUGHT BY: DR. CECILIA MARTINEZ (Visiting Professor) CV: ([view pdf](#))

Visiting Professor [Dr. Cecilia Martinez](#) is the co-founder and Director of Research Programs at the Center for Earth, Energy, and Democracy (CEED).

Course Description:

Climate change will continue to be a critical environmental challenge. In as much as it is a global phenomenon, it requires actions at an international scale. However, the impacts of climate change are experienced at the local level, which requires national and local actions as well. The course explores these global environmental challenges and different governmental-scale responses to climate change. The focus is on addressing issues of justice and equity in the context of climate change strategies. We will focus on development of analytic and conceptual frameworks for addressing climate change that includes consideration of the implications of climate change on energy systems, social and economic justice and environmental sustainability.
